Course: Advanced Stata programming and introductory Mata

Mata is a full-fledged programming language that operates in the Stata environment. The mata language is primarily designed to manipulate matrices, which makes it particularly useful for programming statistical methods. The course introduces basic concepts of the language and discusses ways to interact between Stata and Mata. The course

Mata Programming I

Mata can access Stata variables, local and global macros, scalars and matrices, and modify the contents of those objects as needed. If Mata's view matrices are used, alterations to the matrix within Mata modifies the Stata variables that comprise the view. Christopher F Baum (BC / DIW) Mata Programming I NCER/QUT, 2015 10 / 73

ther a Stata macro or a scalar (to be discussed below)¹ But that correspondence is not one-to-one, since a Stata macro may contain multiple elements: in fact, it may contain any combination of alphanumeric characters. The Stata macro is really an alias which has both a name and a value: when its name is dereferenced, it returns its value.
